
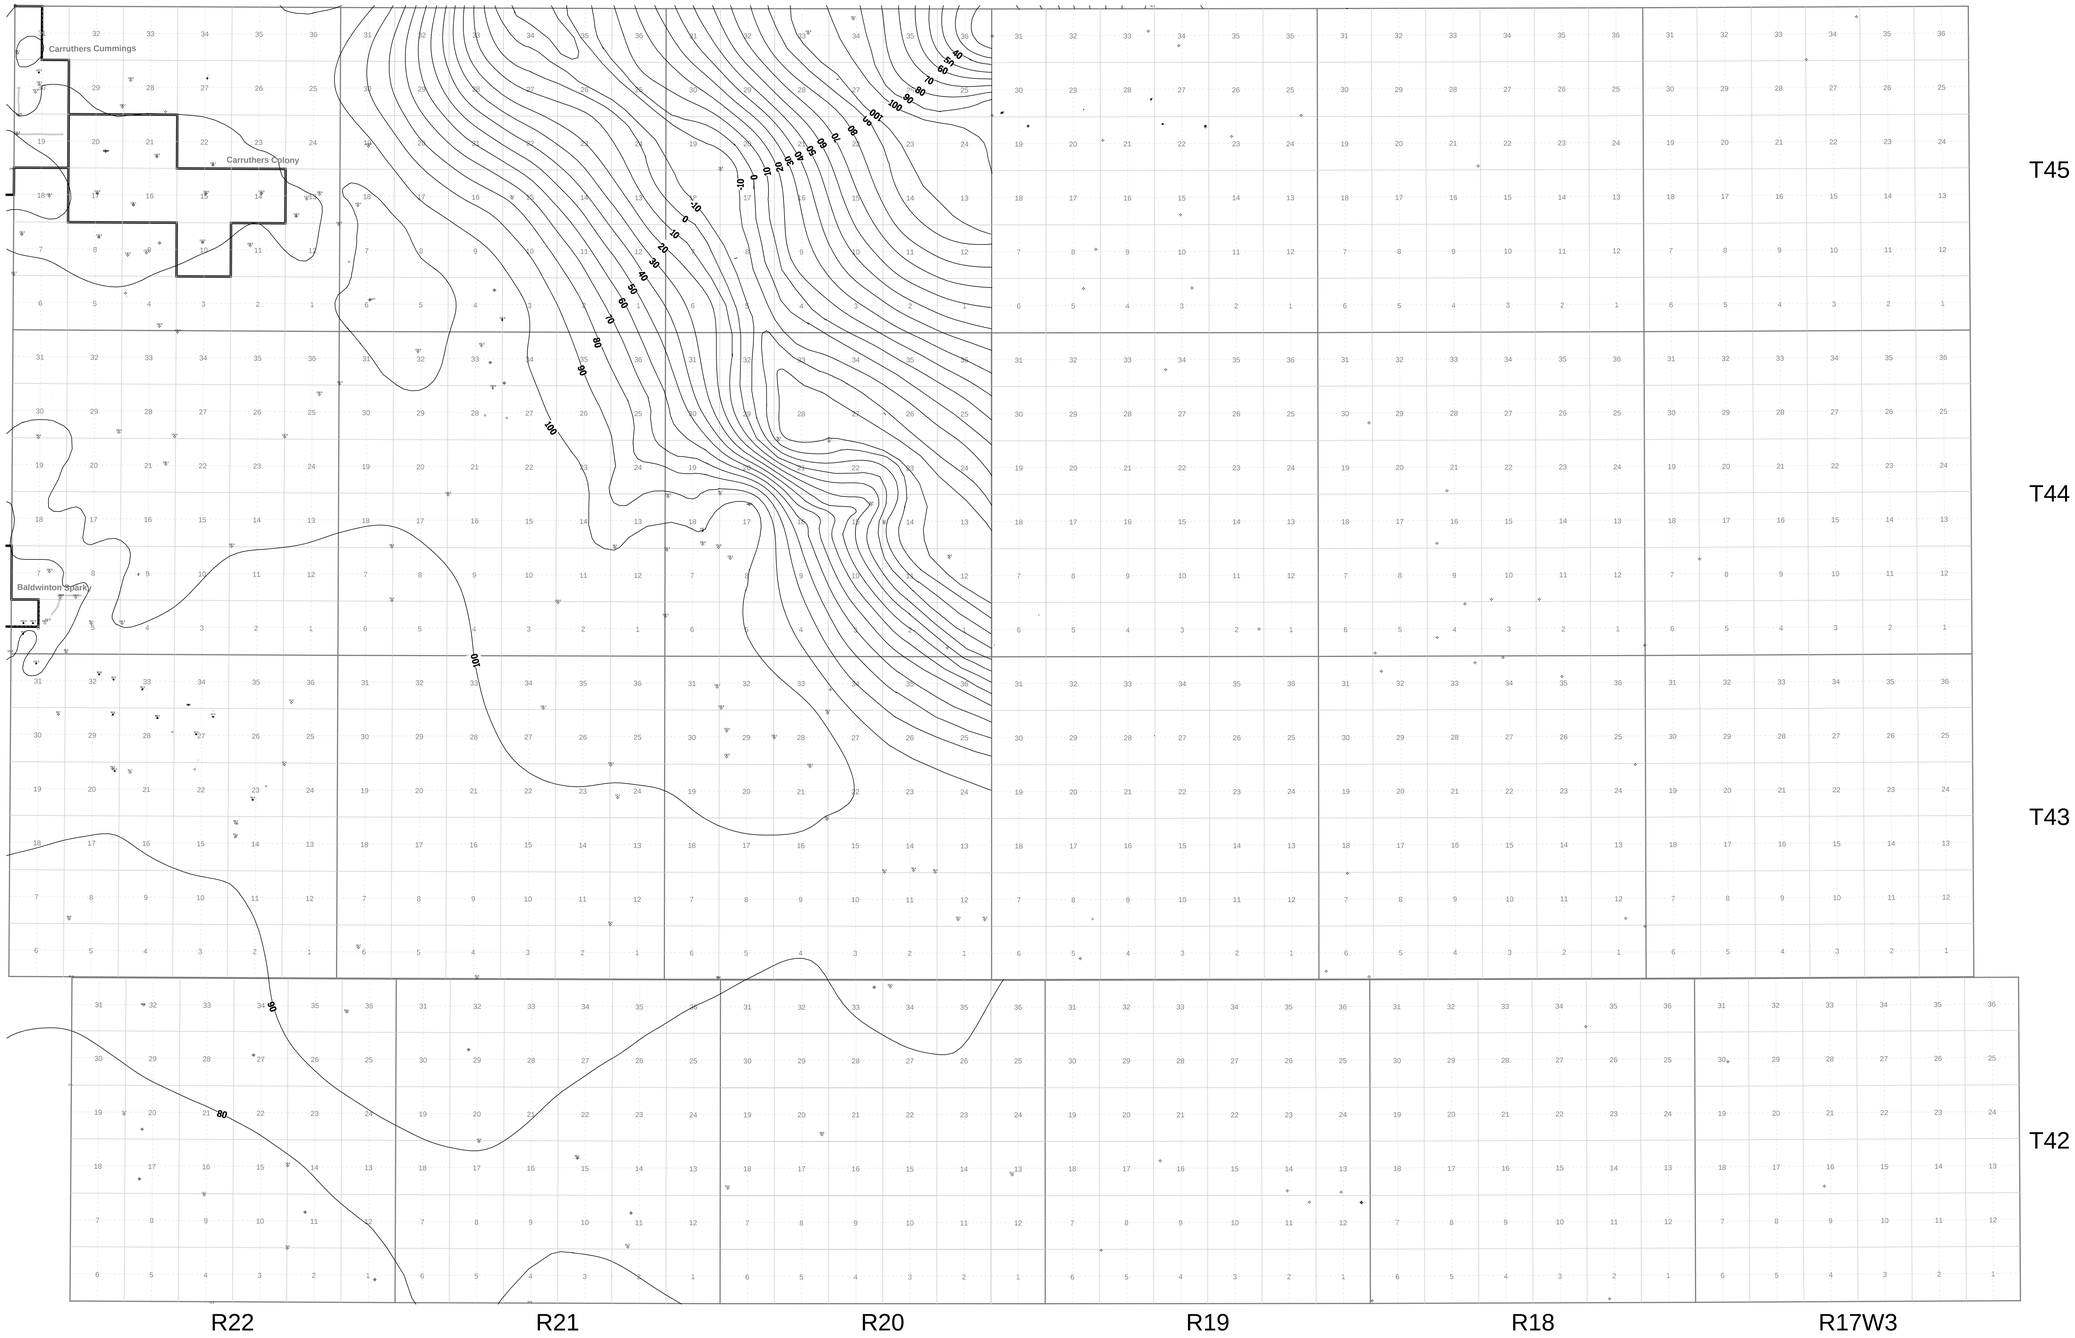

Mapping methodology:

The custom User Database, developed and maintained by the Geology and Petroleum Lands Branch in the generation of structure contour maps, utilized the Surfer contouring module in geoScout for windows (geoLOGIC systems ltd.) and incorporated geological tops and interpretations from the discontinued K-map series. Each new well is picked by our mapping geologists to ensure consistency and accuracy. PLEASE NOTE: wells without values were either confidential at the time of mapping, are too shallow, or no logs were run across the horizon.
